

Stubber Company Profile

Complete AI Agent Solution

Build conversational agents for customer support, sales, internal workflows, and more—all on one platform.

The Conversational Shift

Bring human conversation back into business

Conversational Agents

External

Scale your customer touch points without scaling costs. Handle support, sales, and engagement 24/7.

- Customer Support
- Quoting Systems
- Sales Agents

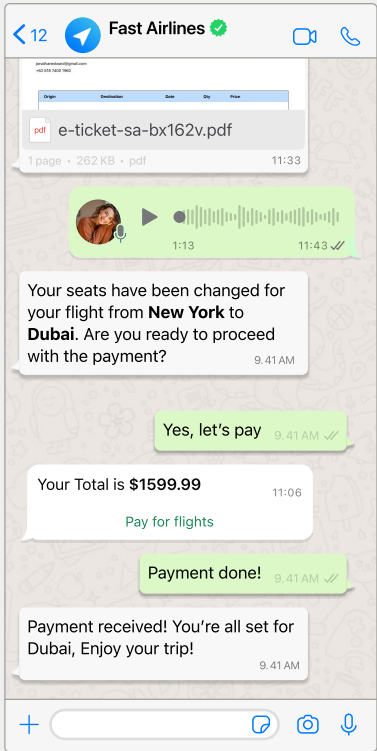

Internal

Free your team from repetitive work. Automate approvals, applications, and administrative tasks.

- Purchase Order Approval
- Leave Application Clerk
- Recruitment Agent

Every Feature You Need

Unified platform eliminates integration complexity

Fully Integrated Stack

Build faster with everything in one place.

Visual workflow builder, model garden with multiple LLM providers, RAG for knowledge integration, omnichannel communication, real-time collaboration, version control, testing frameworks, and production monitoring.

No vendor juggling, no integration projects—just a complete platform that works out of the box.

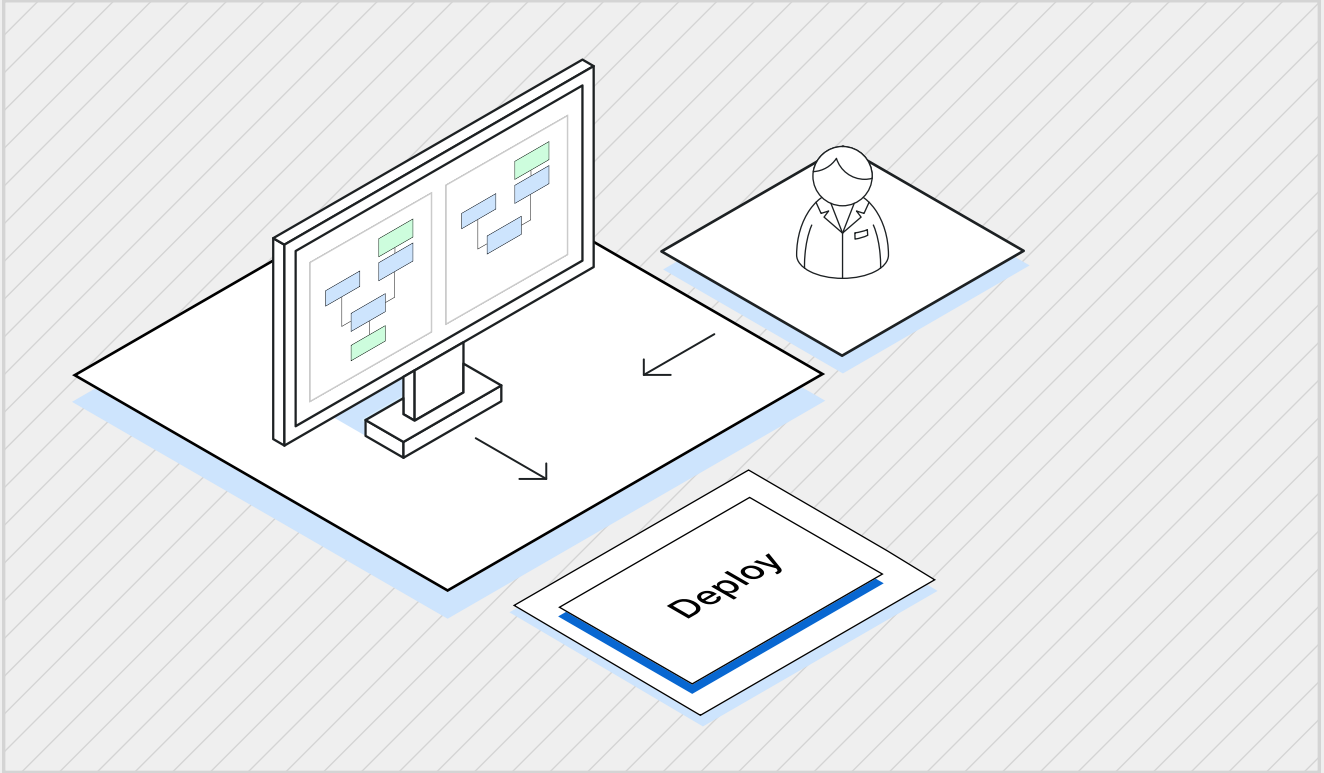

Deploy agents confidently knowing every interaction is checked and validated automatically.

Built-In Quality Control

AI guardrails provide automatic quality control. Before any response reaches users, Stubber validates content against your configured rules—preventing hallucinations, enforcing brand tone, blocking inappropriate outputs, and ensuring policy compliance.

Build

Visual builder powered by the Stubber Framework

Build Visually

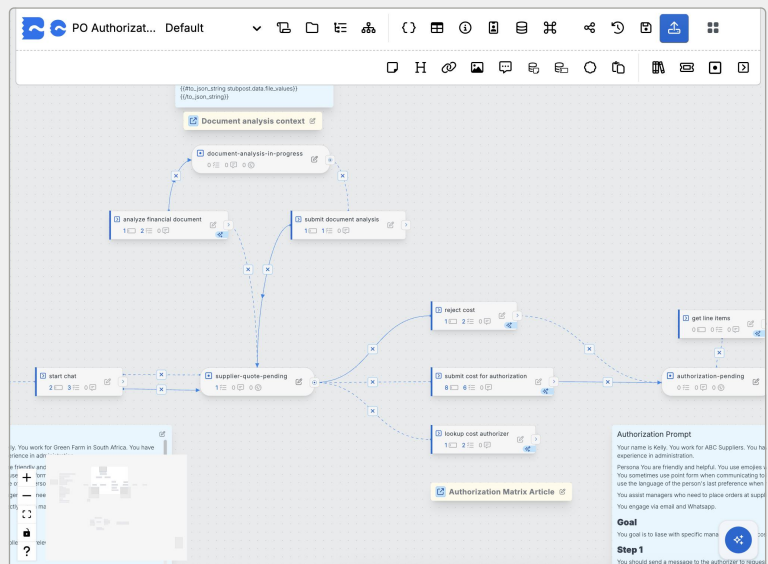

Use our **visual builder** to create conversational agents.

Map states, define actions, set conditions—all through an intuitive interface. The Stubber Framework ensures your agents are structured and maintainable while handling complex logic and edge cases.

Deploy Instantly

Click Deploy and your build becomes a production-ready agent in seconds.

No code compilation, no infrastructure configuration, no deployment pipelines. Your agent scales automatically across our infrastructure, ready to handle conversations immediately.

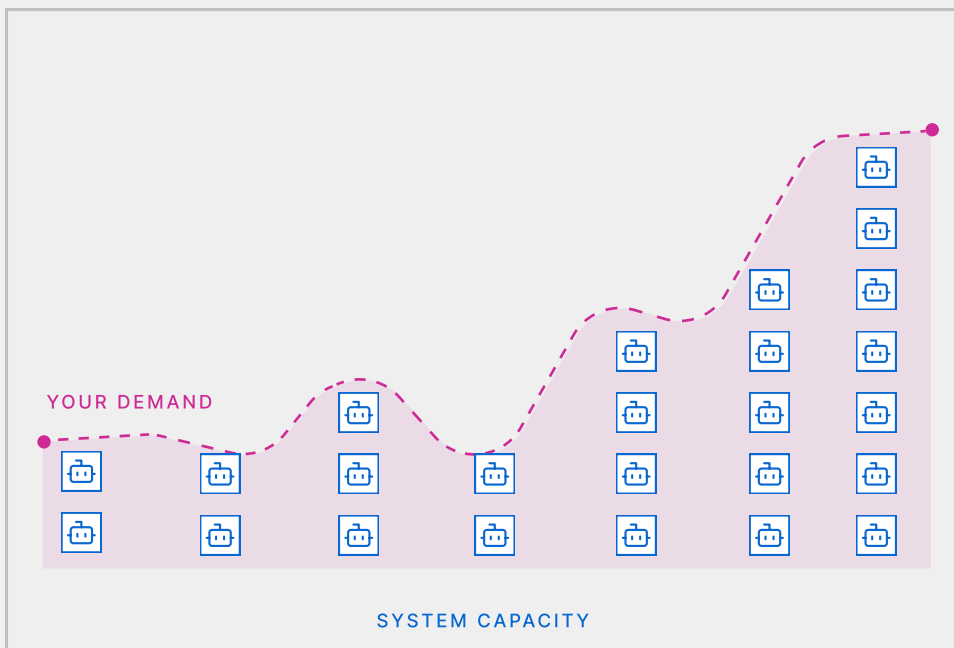

Deploy & Scale

Instant deployment with automatic horizontal scaling

Go from concept to production in hours, then handle unlimited conversations—infrastructure that deploys instantly and scales automatically with your needs.

Stubber automatically scales your agents horizontally across our infrastructure—handling sudden spikes or steady growth without any action required from you. Automatic scaling means you never worry about capacity, provisioning, or downtime. Your agents simply work, no matter how fast you grow.
