

# Allow AI Agents to Work On Your Internal Systems

Empower your organization with secure AI automation

## Virtual Worker Capabilities

- ✓ Access and interact with internal applications
- ✓ Communicate via WhatsApp, email, and other channels
- ✓ Execute tasks 24/7 with consistent accuracy
- ✓ Place orders directly in existing systems
- ✓ Work like a human employee - no system changes required

## Complete Visibility and Control

Watch your virtual worker navigate **web browsers** and **process files** directly within your secure environment.

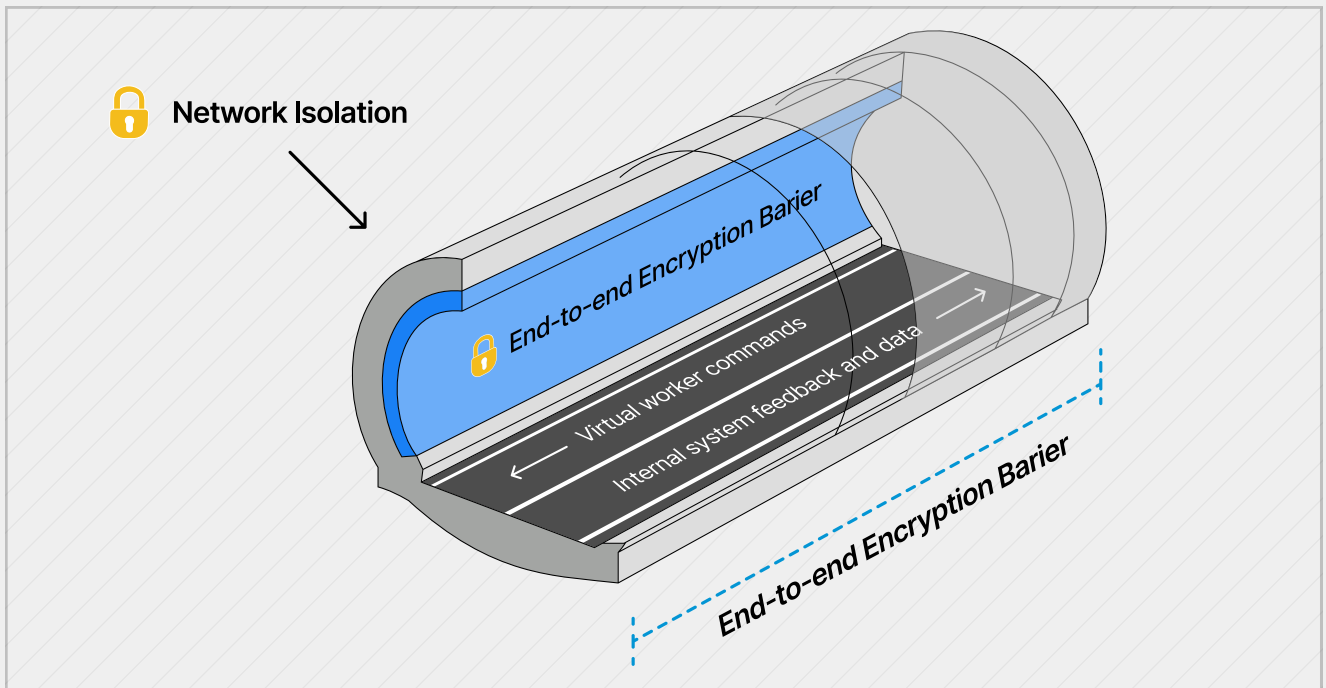

Our console provides live visibility as it browses internal systems and handles documents, **just like a human employee**.

# Stubber Secure Link (S-SL)

Enterprise-grade security for AI automation

## What is Secure Link?

Secure Link is a private-key encrypted tunnel that enables AI agents to securely access and operate within your corporate network. The connection ensures your sensitive systems remain protected while allowing powerful AI automation capabilities.

## S-SL Key Features

### Private Key Encryption

End-to-end encryption using private keys ensures only authorized AI agents can access your systems

### Zero Trust Architecture

Every connection is authenticated and validated before granting access to internal resources

### Network Isolation

AI operations remain isolated from public internet, keeping your data within your security perimeter

### Audit Trail

Complete logging of all AI actions for compliance and security monitoring
